

MPO asymmetry: w1 vs w2 training, evaluated on three input sets ($N = 8$, $T_{\text{model}} = 3$)

$p = 0.01$, weight-1 eval ($w_2/w_1 \rightarrow w_1$)

$p = 0.01$, weight-2 eval ($w_2/w_1 \rightarrow w_2$)

$p = 0.01$, random eval ($w_2/w_1 \rightarrow \text{random}$)

$p = 0.05$, weight-1 eval ($w_2/w_1 \rightarrow w_1$)

$p = 0.05$, weight-2 eval ($w_2/w_1 \rightarrow w_2$)

$p = 0.05$, random eval ($w_2/w_1 \rightarrow \text{random}$)
